

Corporate Performance Management (CPM) tools can be exceptionally powerful to businesses that wish to leverage data on a timely basis to drive business excellence. A CPM solution sits on top of different systems; be they multiple Enterprise Resource Planning (ERPs), or a combination of business systems. CPMs combine data from multiple sources, multiple legal entities, multiple global business units, and multiple currencies to quickly provide management consistent reporting and analysis across your organization. Aside from Management Reporting, Scorecards, and Analysis, a CPM is often used to generate SEC Reporting, Tax Reporting, and Lender Reporting... plus it can be leveraged to drive Intelligent Budgeting and Forecasting across your organization.

CPM – Driving Business Excellence shows the flow of data from your source systems through ETL (Extract, Transform, Load) tool and eventually generating reporting & analysis for both internal and external consumption.

Excel Global Partners (EGP) has extensive experience across numerous leading CPM tools. Leveraging this knowledge, along with our real-world experience and business acumen, we are able to guide you through selection and evaluation to implementation and design to training & roll-out of a CPM solution that works for you! Beyond Go Live, EGP can provide out-sourced administration and maintenance that fits your organization’s needs

THE POWER OF CPM
